

— THE TICK-BOX TEST

Are you just ticking the box?

Ten honest questions for anyone responsible for a building. Tick the ones you can answer with confidence.

- ☐ Our site drawings are current and include every extension and alteration ever made.
- ☐ We could put our hands on any drawing in minutes, without digging through box files.
- ☐ Every emergency light, exit and sign is recorded with its exact location on a plan.
- ☐ Every fire door, damper, call point and alarm device is mapped and numbered.
- ☐ We can locate any electrical distribution board and its isolation points immediately.
- ☐ Given a device number from the fire or intruder panel at 2am, we could walk straight to it.
- ☐ Deadlegs and infrequently used water outlets are identified for legionella flushing.
- ☐ Asbestos, gas services, lightning protection and fire containment walls are all on our plans.
- ☐ Every inspection sign-off is backed by location-pinned photographic evidence, not just a signature.
- ☐ A contractor visiting for the first time could find every location without hand-drawn maps or an escort.

Ticked all ten? You're in rare company.

Most sites can't. Drawings go out of date, knowledge leaves with the people who held it, and inspections quietly become a tick-box exercise. Every box you couldn't tick is exactly what InspectDraw Pro fixes: your drawings searchable on a tablet, every safety item pinned to its location, and reports backed by photographs.

See it on your own drawings.

Send us one of your floor plans and we'll show you the workflow on it before you buy.
